INTRODUCTION

NEXT CARE

"NEXT CARE provides Integrated Home Care (ADI).

The collaboration of the individuals receiving care, their family members, and caregivers is invaluable to our organization in offering the best and most appropriate level of care to those being assisted."

INTEGRATED HOME CARE (ADI): WHAT IS IT?

It is the set of services provided by healthcare and social-health operators to fragile or non-self-sufficient individuals at their homes, in an integrated, planned, and coordinated way, with continuous care over a prolonged period. These activities are carried out by doctors, nurses, rehabilitation therapists, social-health operators (OSS), speech therapists, dietitians, psychologists, and social workers. The implementation of integrated home care is regulated by national and regional laws and performed under the directives and supervision of the ASL responsible for the patient's home. The services provided are of high quality, taking into account the specific needs of users regarding age, gender, health conditions, and physical and psychological fragility, while respecting religious, cultural, and linguistic specificities. This also involves home support for individuals and families with physical, mental, or sensory disabilities.

OBJECTIVE

The goal is to provide fragile or non-self-sufficient individuals with the care they need at their home, without requiring hospitalization or admission to a nursing home or care facility. Integrated home care, therefore, ensures that individuals receive everything necessary to fulfill their health rights at their home, with the utmost respect for their dignity, utilizing home resources and comforts, and integrating as much as possible with the activities of their family members.

GUIDING PRINCIPLES

EQUALITY

Healthcare services are provided without discrimination based on gender, race, language, religion, personal opinions, or social status, in accordance with Article 3 of the Italian Constitution.

SECURITY

Services are provided under the highest clinical, instrumental, and environmental safety conditions.

EFFECTIVENESS AND EFFICIENCY

Assistance services are provided in a manner that ensures maximum effectiveness (objectivity of the result) and maximum efficiency (ratio between the cost incurred to provide them, understood in its broadest sense and not only economic, and the benefit actually obtained).

GUIDING PRINCIPLES

RIGHT TO CHOOSE

The right of the assisted person to choose the assistance provider from among the disbursing bodies accredited by the Lazio Region, in harmony with current legislation, is respected and guaranteed.

RIGHT TO PARTICIPATE

Complete and correct information is always ensured for the people assisted and their caregivers about the assistance activities provided and their right to express criticism and suggestions in this regard is always requested, and in any case ensured, which are essential moments for the continuous improvement of the quality of the services provided.

TRANSPARENCY

All care activities are carried out in conditions of maximum transparency, with particular attention to clinical-therapeutic and rehabilitation aspects, the use of professional resources and and the evaluation of results.

QUALITY STANDARDS

PRIVACY

The personal data of the assisted persons and caregivers are processed in the strictest compliance with current legislation.

IDENTIFICATION OF OPERATORS

The healthcare staff, upon entering the home, must display and show the identification card, must introduce themselves, the company and the service, respond clearly and courteously to doubts, perplexities or requests from the patient/family member and illustrate and provide the documentation necessary to carry out the activity (PAI, Informed Consent, Authorization to process sensitive data, etc.).

USER SATISFACTION

Assisted persons and caregivers are provided with a special form to express any degree of satisfaction or dissatisfaction in relation to the care activities provided, in order to collect the relevant information, observations, criticisms and possible suggestions for improvement, both periodically and occasionally. The operators of the Operations Centre participate in this listening and information activity on every occasion. The information collected in this way is valuable, as mentioned in the introduction, for the continuous improvement of the quality of the assistance provided, which is the primary and most ambitious objective of the service offered. informazioni, osservazioni, critiche e i possibili suggerimenti migliorativi, sia in forma periodica che in forma occasionale. A questa attività di ascolto e informazione partecipano in ogni occasione gli operatori della Centrale Operativa. Le informazioni così raccolte sono preziose, come accennato nella premessa, per il miglioramento continuo della qualità dell'assistenza fornita, che costituisce l'obiettivo primario e più ambizioso del servizio offerto.

INDIVIDUAL HOME CARE ✨ • • • • PATHWAY

The integrated home care provided to frail or non-self-sufficient individuals is established by the PAI (Individual Assistance Plan). The PAI defines the type, number, frequency and duration of the home care services provided, together with the professional figures who, from time to time, ensure them.

It is drawn up by the UVMD (Multi-Dimensional Evaluation Unit) of the ASL competent for the territory and is shared in advance with the assisted person or his family member/caregiver.

The implementation of the PAI is entrusted by the ASL to our Company, as an accredited body by the Region, also in relation to the choice of assisted people or their family members/caregivers.
